Play Therapy

Recognizing children express themselves more fully through play than verbally, CCSEM’s Port Huron office provides this unique therapy through licensed mental health therapists and registered play therapists. Play therapy is most effective for children between 3 and 12 years of age as a means through which feelings can be communicated and conflicts resolved. This enables children to change the way they think about, feel toward, and resolve their problems.

Play therapy at CCSEM begins with a thorough assessment completed by the therapist and the parents of the child who together develop treatment goals and objectives. Play therapy can be used as the primary intervention for behavioral issues caused by bullying, grief and loss, divorce, abandonment, physical and sexual abuse, crisis, and trauma. Play therapy also addresses mental health disorders such as anxiety, depression, ADHD, autism spectrum, social and academic impairment, and conduct disorders.
